

KIRAN VIJAYKUMAR CHOUDHARI

Software Engineer

7411971510 ◇ choudharikiranv2003@gmail.com ◇ Bengaluru, India ◇ [LinkedIn](#) ◇ [GitHub](#)

SUMMARY

Software Engineer who builds and ships backend systems under real constraints—designing high-throughput APIs, AI-powered pipelines (RAG, LLMs), and cloud deployments that prioritize performance, reliability, and operational sanity.

EXPERIENCE

Full Stack Developer Intern

Jun '25 — Present

Salesence

Remote

- Designed and developed **RESTful backend APIs** using **Node.js, Express, and TypeScript**, exposing **15+ endpoints** for a subscription-based SaaS platform serving e-commerce sellers.
- Integrated **PostgreSQL (Prisma ORM)** for data persistence, **Redis caching (1-hour TTL)** for frequently accessed data, and **BullMQ** for asynchronous background job processing.
- Implemented **payment workflow integration** using the **iyzico payment gateway**, enabling secure subscription and billing operations.
- Built a **web scraping system** using **Playwright** with stealth techniques, anti-detection handling, and marketplace-specific extractors for **Amazon, Trendyol, and Hepsiburada**.
- Integrated multiple **AI service providers (Replicate, Groq, OpenAI, Google Gemini)** with **fallback routing and retry logic** to improve reliability of AI-powered features.

PROJECTS

DokGuru - AI-Powered Multilingual Document Assistant [Link](#)

Nov '25 — Present

- Developed a **full-stack AI platform** for multilingual PDF Q&A using React, Flask, and RAG architecture.
- Integrated **Supabase Auth with Google OAuth** and **JWT-based** authorization to manage secure user sessions and protect document-level access in a cloud-deployed application.
- Integrated **multilingual translation and text-to-speech (TTS)** using Edge TTS, Google Cloud TTS, and Piper to support voice-based answers in regional languages.
- Deployed the **frontend on Vercel** and the **backend on Google Cloud (Cloud Run)**, enabling scalable and reliable production deployment.
- Designed and implemented **CI/CD pipelines using GitHub Actions** for both frontend and backend, automating build, test, and deployment workflows on every push.

ShopEase – Full-Stack E-Commerce Web Application [Link](#)

Jun '25 — Jul '25

- Designed and developed a full-stack e-commerce platform using **Flask, SQLite** and **Tailwind CSS**, supporting both customer and seller workflows (cart, wishlist, reviews, multi-mode payments: Card, UPI, Net-banking, COD).
- Implemented secure user **authentication**, OTP-based login/registration flows, role-based access control and **session management** to isolate buyer vs. seller functionalities.
- Integrated responsive **UI/UX** with **AJAX** based client-side updates (cart/wishlist) and optimized backend data handling (SQLite queries, indexing, transactions) to deliver a seamless shopping experience.
- Built a **seller-dashboard module** with GST verification and product CRUD (create, read, update, delete) functionality, enabling merchants to self-manage their inventory and orders.

SKILLS

Programming Languages Python, JavaScript

Backend & APIs Node.js, Express.js, Flask, RESTful API, JWT Auth

Database & Caching SQL, MongoDB, PostgreSQL, Qdrant, Redis

Frontend ReactJS, Tailwind CSS

AI / ML RAG pipelines, LLMs, Embeddings, CNNs

Deployment/DevOps Docker, Azure, Google Cloud (Cloud Run), Vercel, Github Actions

Concepts Object-Oriented Programming, API Design, Authentication & Authorization

EDUCATION

B.E in Artificial Intelligence & Machine Learning, MVJ College of Engineering (GPA: 7.4)

Dec '21 — Jun '25

PUC in PCMB, Tungal Independent PU College Vijayapura (Result: 90%)

Jun '19 — Jul '21

SSLC, M E S High School Chadchan (Result: 86%)

Jun '18 — Apr '19

CERTIFICATIONS

The Web Developer Bootcamp 2025, Udemy

Dec '25

Responsive Web Design, FreeCodeCamp

Aug '23
